Medium correlation shift: accuracy depends on available information
Frozen prior, low-band only
Target-family labels + low-band
Known exact speed family + low-band
Both target fields leaked (oracle)
True medium readout (oracle)
Original broad source
Unseen narrow 2 m source
Raw complex relative L2 at 800 Hz (no phase alignment)
10^{0}
10^{-1}
10^{-2}

New taper-10 system index
All curves use the same 16 systems. Orange has 512 extra target-family labels; blue knows the true synthetic family; purple/green read target field/medium. Not a fair ranking.
